

## ROBOTICS SOLUTIONS

Today, the market offers us many different models of robot that are compact and especially designed to function with all types of workload and in all workplace environments. At DNC, we select the most appropriate option for each application and can personalize and adjust any robot with its own unique gripper head and specific design. The correct combination of experience and the appropriate robotic solution can be the key to success in these types of applications.

## APPLICATIONS

Of products from manufacturing lines: boxes, sacks, bottles, cans, etc. All this applied to the different sectors and activities. Multi-product or inter-viable heads for performing a variety of tasks. The complexity of this process can be very variable, from the simplest case in which the robot collects and leaves the products in a preset position, to those applications in which the robot needs external sensors, such as artificial vision, to determine the position of collection and placement of products.

- Handling
- Embedded
- Palletizing

## METHODOLOGY

- Identification of automation needs with industrial robots
- Integration regardless of brand or customer preference
- Selection of the most suitable robot model
- Design and manufacture of the head according to the application
- Assembly and programming
- Integration with the rest of the installation
- Training and training of the user

## ACCESSORIES

Roller Conveyors, Chains, Hinges	✓
Balers	✓
Boxformers	✓
Transfers	✓
Turntable tables	✓
Lifts	✓
Dispensers / Pallet Stacker	✓
Protections and security	✓
Communication and interconnection with production control systems	✓
